Introduction to Application

This is a sample document to test the *Markdown to PDF Converter*. It includes several challenging formatting elements such as MathJax equations and Mermaid.js diagrams to ensure the underlying rendering engine, **Playwright**, behaves correctly.

1. Standard GFM Elements

Feature	Support	Note
Tables	Yes	GFM Plugin required
Strikethrough	Yes	`~~strike~~` -> ~~strike~~
Autolinks	Yes	https://example.com

2. Mathematical Equations (MathJax)

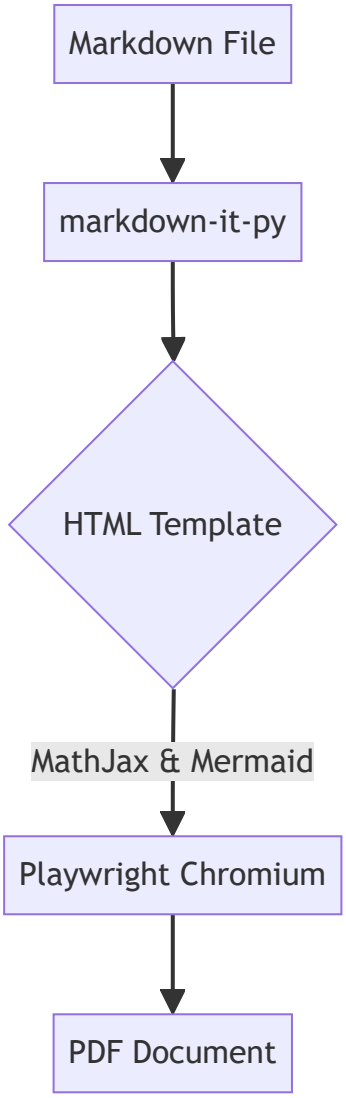

We check inline math such as $E = mc^2$ and block math:

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

$$\int_0^\infty e^{-x^2} dx = \frac{\sqrt{\pi}}{2}$$

3. Diagrams (Mermaid.js)

Below is a flowchart representing the conversion process:

Conclusion

If all these elements are visibly correctly formatted in the final PDF, the conversion pipeline is robust and ready for production use.
